

For Line & Lift Station FOG Treatment

Green. Tested. Effective. Preferred.

## The Grease Guarde MicroTab

The Grease Guarde **MicroTab** is a timed-release, multi-strain, microbial formula specifically designed for efficient digestion of fat, oil, and grease (FOG), organic buildup and associated odors in lift stations and sewer lines. These easy-to-set tablets also require no electrical or liquid storage equipment so remote dosing can be applied virtually anywhere.

**No Enzymes**  
**No Solvents**  
**No Emulsifiers**

The effective way  
to make nature  
work for you...

What's the advantage of a **MicroTab**? Most products on the market today contain high concentrations of solvents and enzymes which liquefy grease, pushing it further down the line to re-solidify; creating clogs and continued organic matter buildup. In contrast, the Grease Guarde **MicroTab** time-releases trillions of natural aerobic bacteria, which thrive by devouring grease and organic buildup. Converting fats, oils and grease into H<sub>2</sub>O and CO<sub>2</sub>, this model of nature's technology leaves lines clear and worry-free... with no negative by-products to be pushed downstream.

With a great impact against FOG, odors and buildup, the Grease Guarde **MicroTab** is a proven, cost-effective and preferred solution for the treatment and maintenance of sewer lines, pumping stations and lift stations.

### Eliminating/Reducing

- Fats, Oil, Grease
- Foul Odors
- Costly Pumping
- Man-Hours
- Costly Chemicals
- Transport Costs
- Grease Disposal
- Landfill Needs
